ECE 540 Project 1 List of Files (Last updated 12-Jan-2014)

Documentation files		
Name	Description	
docs\BotSim Functional Spec.pdf	Functional specification of the BotSim external	
	interfaces	
docs\BotSim Theory of Ops.pdf	Internal theory of operation for the BotSim	
	Simulator. You don not need to understand this	
	material for Project 2 but you may find it	
	interesting.	
ocs\project1.pdf	The Project 1 write-up	
docs\Proj1Demo Example Design	Theory of operation for the Project 1 demo	
Description.pdf	example. Includes description of the user	
	interface	
docs\RojoBot World Video Controller.pdf	Theory of operation and task list for adding the	
	video controller to your Rojobot system. Your	
	demo will be based on this system coupled with	
	the Project 1 track that includes left and right	
	turns.	
docs\Proj1 Bot Tracker.rtf	Text file showing the simple right-turn-only	
	track for the Rojobot. You may use this file to	
	check that your Rojobot system is running	
	correctly before you have the video controller.	
docs\ECE 540 Project 1 List of Files.pdf	This document	
Verilog and constraints files for the Rojobot (no video)		
Name	Description	

hdl_rojobot\proj1demo.v	Program file for the application Picroblaze	
	CPU. Produced by the kcpsm6.exe assembler	
	from proj1demo.psm	
hdl_rojobot\debounce.v	Debounces pushbuttons and switches	
	(unchanged from the Getting Started project)	
hdl_rojobot \sevensegment.v	Seven segment display interface	
1	(unchanged from the Getting Started project)	
kcpsm6.v	Xilinx PicoBlaze for Spartan 6. This file is NOT included with the release. You should	
	download the latest Picoblaze from the Xilinx	
	web site	
nexys3fpga.v	Top level Verilog file for the demo. This file is	
nenjusipga.v	NOT included with the release. You may find	
	the nexys3fpga.v file from the Getting Started	
	project to be a good starting point for creating	
	it.	
nexys3_bot_if.v	I/O interface between the application CPU and	
	the Nexys 3 board periperhals and the Botsim.	
	This file is <u>NOT</u> included with the release.	
	You may find the file	
	kcpsm6_design_template.v which is part of the	
	Picoblaze release helpful in creating this.	
Verilog files for the Botsim		
Name	Description	
Name hdl_rojobot\bot.v	BotSim top level module. Instantiates a	
	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program,	
hdl_rojobot\bot.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v	
	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator.	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler.	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator.	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\ world_if.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\ world_if.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM,	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\ world_if.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\ world_if.v hdl_rojobot \ world_map.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\ world_if.v hdl_rojobot \ world_map.v	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use nexys3fpga_video.ucf once you have	
hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\ world_if.v hdl_rojobot \ world_map.v constraints\nexys3fpga_novideo.ucf	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use nexys3fpga_video.ucf once you have implemented the Rojobot video controller.	
hdl_rojobot\bot.v hdl_rojobot\map.v hdl_rojobot\world_if.v hdl_rojobot \world_map.v hdl_rojobot \world_map.v constraints\nexys3fpga_novideo.ucf	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use nexys3fpga_video.ucf once you have implemented the Rojobot video controller. For the Rojobot video controller	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\ world_if.v hdl_rojobot \world_map.v constraints\nexys3fpga_novideo.ucf Verilog and constraints files f	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use nexys3fpga_video.ucf once you have implemented the Rojobot video controller. For the Rojobot video controller Description	
hdl_rojobot\bot.v hdl_rojobot\map.v hdl_rojobot\world_if.v hdl_rojobot \world_map.v hdl_rojobot \world_map.v constraints\nexys3fpga_novideo.ucf	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use nexys3fpga_video.ucf once you have implemented the Rojobot video controller. For the Rojobot video controller Description Generates the video raster timing signals	
hdl_rojobot\bot.v hdl_rojobot\map.v hdl_rojobot\map.v hdl_rojobot\ world_if.v hdl_rojobot \ world_map.v constraints\nexys3fpga_novideo.ucf Verilog and constraints files f	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use nexys3fpga_video.ucf once you have implemented the Rojobot video controller. For the Rojobot video controller Description Generates the video raster timing signals vert_sync, horiz_sync, video_on, and	
hdl_rojobot\bot.v hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\ world_if.v hdl_rojobot \world_map.v constraints\nexys3fpga_novideo.ucf Verilog and constraints files f	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use nexys3fpga_video.ucf once you have implemented the Rojobot video controller. For the Rojobot video controller Description Generates the video raster timing signals vert_sync, horiz_sync, video_on, and pixel_row and pixel_column, which indicate	
hdl_rojobot\bot_pgm.v hdl_rojobot\map.v hdl_rojobot\world_if.v hdl_rojobot\world_map.v hdl_rojobot\world_map.v constraints\nexys3fpga_novideo.ucf Verilog and constraints files f	BotSim top level module. Instantiates a PicoBlaze and the Rojobot simulator program, world_if.v, and map.v Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The register-based interface to the BotSim Simulator Instantiates a 16Kx2 bit dual-port ROM, produced by Xilinx Core Generator, which holds a map of the RojoBot's virtual world Constraints file for project 1. There are no VGA signals included. Use nexys3fpga_video.ucf once you have implemented the Rojobot video controller. For the Rojobot video controller Description Generates the video raster timing signals vert_sync, horiz_sync, video_on, and	

hdl_video\DCM_SP_template.v	A Digital Clock Manager instantiation template configured generate a 25MHz VGA pixel clock. Paste this into your top-level module and connect your 100MHz input and 25MHz output appropriately.
hdl_video\bot_pgm.v	Program file for the BotSim simulator. Produced by the kcpsm3.exe assembler. The Rojobot moves more quickly through the output track if you include this file in your project instead of the bot_pgm_v file in the hdl_rojobot directory.
nexys3fpga.v	Top level Verilog file for the demo. This file is NOT included with the release. You may have to modify your nexys3fpga.v from thr first part (no video) of the project to include the VGA signals
nexys3_bot_if.v	I/O interface between the application CPU and the Nexys 3 board periperhals and the Botsim. This file is NOT included with the release. You may have to modify you nexys3_bot_if.v from the first part (no video) of the project to include any additional registers that you add to the interface
constraints\nexys3fpga_withvideo.ucf	Constraints file for project 1. This file includes the VGA signals. Use nexys3fpga_novideo.ucf if you have not included the video controller in your top leel
World Maps	

Name	Description
world_maps/world_map_basic/world_map.ngc	This is a simple world map that includes only
	right turns. You can use this file to check
	and/or debug your Rojobot implementation.
	Copy world_map.ngc to your synthesis
	directory for the project. The
	world_map_basic/map directory contains a file
	called worldmap_basic.doc which shows the
	layout of the track
world_maps/world_map_lr/world_map.ngc	This is a the world map you should use for your
	demo. It contains both left and right turns.
	Copy and overwrite world_map.ngc in your
	synthesis directory for the project. The
	world_map_lr/map directory contains a file
	called worldmap_lr.doc which shows the layout
	of the track
world_maps/world_map_loop/world_map.ngc	This is a fun map that contains loops but only
	right turns. You can use it to debug your video
	logic before you add the video controller to the
	project Copy and overwrite world_map.ngc
	in your synthesis directory for the project. The
	world_map_loop/map directory contains a file
	called worldmap_loop.doc which shows the
	layout of the track
	or the BotSim
Name	Description
firmware\proj1demo\proj1demo.psm	PicoBlaze Assembly language source code for
	the Proj2Demo program
firmware\proj1demo\proj1demo.v	Copy of the file hdl_rojobot\proj1demo.v
firmware\proj1demo\ROM_form.v	Template used by the Picoblaze assembler.
	This file includes support for JTAG program
	updates. See kcpsm6 User Guide for details
